

ALGAE GUARD

EPA-Registered Drain Pan Protection

Algae Guard is an EPA-registered, time-release treatment that inhibits algae, slime, and biofilm in HVAC condensate pans to prevent clogs, odors, and overflows.

EPA Reg. No. 59682-1

EPA-REGISTERED | INHIBITS ALGAE & SLIME | NO OVERFLOWS

What's building up in your Drain Pan?

Biofilm, algae, and slime buildup in condensate pans restrict flow and cause standing water, foul odors, corrosion, and unexpected overflows. Algae Guard's EPA-registered formula continuously activates when water enters the pan, inhibiting growth and reducing maintenance calls.

Why Choose Algae Guard?

Continuous Cleaning

Time-release formula activates with water to keep drain pans clean for up to six months.

Prevents Overflows

Continuously prevents buildup that leads to restricted flow and standing water.

Fights Odors & Corrosion

Prevents algae, slime, mildew, and odor causing bacteria. Plus a corrosion inhibitor to protect pans.

EPA-registered

Biodegradable, non-dissolving, leaves no residue, and meets strict EPA-registered guidelines.

Long-term drain pan cleaning you can set and forget
